

Crystal Reports Development

Have your reporting needs changed since your initial implementation of TrackWise? Is there data that you would like to extract from the system, but you're not sure how to pull it? Effective use of Crystal Reports can help productivity, enforce accountability, provide better visibility to management and much more.

With the help of Sparta Systems' experienced Crystal Reports Specialists, we'll help you define requirements, develop and deliver reports to meet your users' expectations, and enhance the overall value TrackWise delivers to your organization.

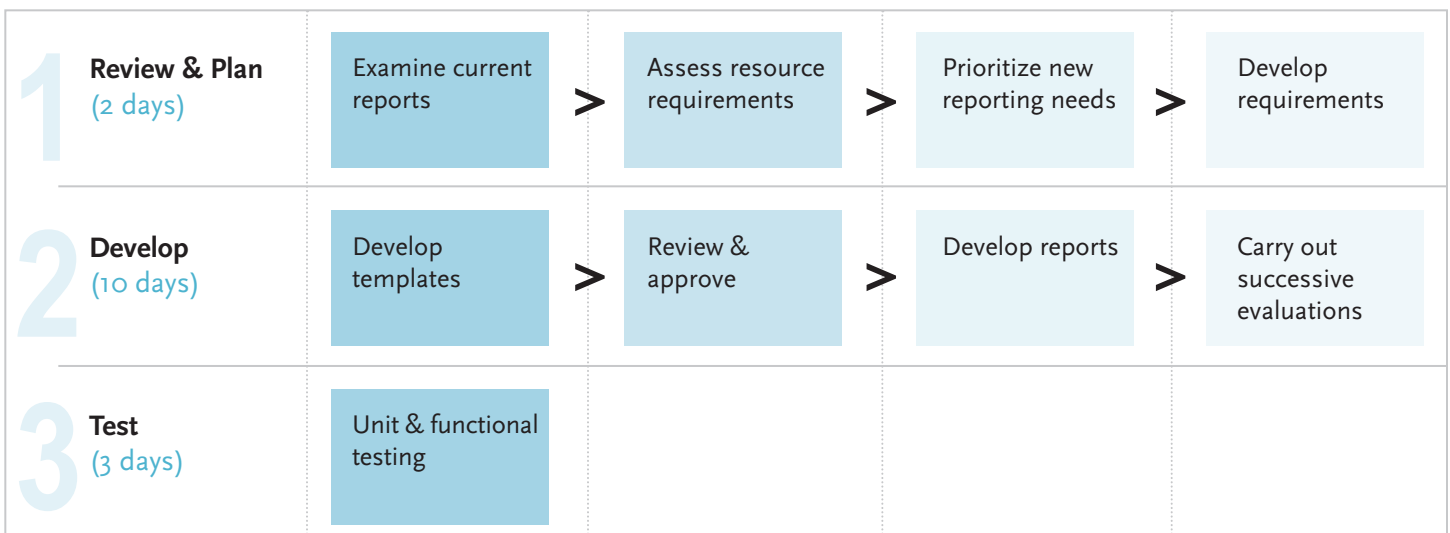

Free Initial Consultation

When you purchase the Crystal Reports Development package, you'll receive a full-day consultation with Sparta Systems free of charge. During this initial consultation, we'll work with you to assess your reporting needs. We'll make a preliminary evaluation of your existing reports and determine what changes, if any, can be made to accommodate your users. We'll define the reports to be completed over the course of the engagement and draft a high-level plan for implementing them.

Sparta Systems will work with you to:

- Define and document your requirements
- Find ways to make your reports multifunctional, reducing the number of reports that must be developed
- Design and deliver queries and dashboards to make these new reports consistent and easy to use
- Test the delivered reports to ensure they'll work to specification — and pass validation

Guided 3-Step Process

Step 1: Review & Plan

A Sparta Systems Crystal Reports Specialist will work with you to perform a thorough examination of your reporting needs and put them in the context of your existing reports. Is the intent to modify existing reports or add additional ones? Can a preexisting report be enhanced to provide the desired functionality? Once these decisions are made, we will assess the resource requirements for each individual report and develop a detailed project timeline that will incorporate report development as well as comprehensive testing.

Step 2: Develop

With an agreed-upon plan in place, it's time to begin creating the reports. The Crystal Reports Specialist can work independently through this period, though we will probably have to occasionally (and briefly) speak with your business users to clarify any ambiguities in the requirements. First, the Crystal Reports Specialist will develop templates that adhere to your company's specific branding and style guidelines. Once these templates are approved, individual reports will be developed. As a report is completed, we will pass it along to your team for initial evaluation while proceeding to work on the next report. As your team provides feedback, we'll update the reports accordingly.

Step 3: Test

Once all of the reports have been developed and have gone through initial review by your team, we will put them through more thorough testing. Sparta Systems will conduct exhaustive unit testing of the reports within the development tools and functional testing within your TrackWise development environment. We'll pass our testing parameters and results on to your validation team, making their job easier.

Crystal Reports have the potential to deliver a great deal of value to your organization, but they can be challenging and time consuming to develop properly. Sparta Systems can do the heavy lifting for you.

Contact us today at sd@spartasystems.com to see how we can help you extract data from your systems that will give you greater insight and drive improved productivity across your organization.
